► High FPC retention force with additional mechanical lock

FPC LOCK mechanism maintains high FPC retention force

FPC retention force comparison (6 p)

10.59 N	4.17 N

► Unique actuator holder design prevents actuator drop-off

Actuator will not fall-off even at **100 N** force

- *Housing destruction occurs first
- *Force applied from 30 degrees backwards

► Usability for closing actuator without FPC

The connector will still function even if the actuator is accidentally closed without the FPC being inserted after the SMT process

- Connector will still function reliably (contact gap graph 22 pins before and after operating actuator without FPC inserted)

- Insertion force of connector goes up
- Retention force of connector does not change significantly
